condition data stored in the storage section, and for outputting an abnormality informing signal when the abnormality has occurred in the vehicle.

(B) **Doao** also fail to disclose a portable communicator is provided for communicating with the data server. The server sends the abnormality informing signal from the abnormality determining section to the portable communicator.

Response to the arguments:

(A) **Doao** eventually indicates that the CPU/microprocessor 4 controls and determines the operation functions and the malfunctions/failures of the vehicle systems and subsystems such as the vehicle ignition system, fuel pump system, and vehicle equipment systems, and as well as the theft alarm system.

(B) **Doao** also teaches that the on-line service and/or internet processing site having a server computer and an RF receiver for receiving all signals from the CPU of the vehicle apparatus, wherein the all signals includes vehicle equipment systems, subsystem operation functions and the malfunctions/failures situation. The RF transmitter is connected to the server computer for transmitting any and all appropriate signals to the appropriate and respective devices of the arrangement of FIG. 11B during the apparatus operation, wherein the all appropriate signals includes the vehicle equipment systems, subsystem operation functions and the malfunctions/failures situation. The appropriate and respective devices includes a portable transceiver 2 and/or the personal computer service PCS 150 which may be adapted to a personal communication device or personal communication service devices includes portable and/or hand-held devices such as cellular telephone.
